

THE FIRST JOVE VIDEO SHOOT IN AFRICA

Four FABlans (Vinolia Danki, Dr Tuan Duong, Dr Andi Wilson and Prof. Brenda Wingfield) participated in a JoVE video shoot. Brenda Wingfield and Andi Wilson were invited to write a publication detailing the CRISPR-Cas9-based fungal transformation system developed by Andi during her PhD studies. JoVE is an online open-access journal and producer and provider of science videos. The video, which will now be produced, is supported by the article text, which is already available online by [clicking here](#).

Andi and Brenda were joined in the making of the video by Tuan and Vinolia. What they only learned just before the cameras started rolling was this was a first for Africa! Irvin Pamana was the videographer contracted for this event and he can be seen with his assistant in the action photo.
