

TREE PLANTING GOES ON DESPITE WET CONDITIONS

Forty-eight students from the Tree Protection Co-operative Programme (TPCP) in FABI braved cool, wet and muddy conditions on the morning of 24 January to replant 1,500 seedlings into potting bags. This was the first Tree Planting event for the year where students from the research programme assist with replanting tree seedlings supplied by industry used in various trials and research projects in FABI. They also assisted in clearing out older trees and pots from the nursery that were no longer needed. The morning's work at the FABI nursery on the University of Pretoria's experimental Farm was rewarded with pizza and cold drinks.
